UNITED STATES DEPARTMENT OF AGRICULTURE
COMMODITY STABILIZATION SERVICE

October 1959

COTTON FACTS FOR COMMITTEEMEN

1960

The purpose of "Cotton Facts for Committeemen" is to provide the State, county, local committees and others with ready reference material which can be used to answer some of the many questions which arise in connection with the cotton acreage allotment, marketing quota, and price support programs. Following is a discussion of the programs in question and answer form with tables showing some of the basic statistical information used in connection with the programs.

1. Will the choice of allotment program under which producers may increase their regular allotments be continued in 1960?

Yes, the Agricultural Act of 1958 authorizes the Secretary, and he has taken the necessary action to provide that, if marketing quotas are in effect, each farm operator who has an upland cotton acreage allotment in 1960 will have the following choice between two programs -- Choice (A) and Choice (B). (If marketing quotas are not approved in the referendum, this optional choice plan will not be in effect.):

(A) He may elect to grow his crop in compliance with his regular upland cotton acreage allotment, in which case he will be eligible for the full level of price support available for the crop (not less than 75 percent of parity for 1960); or

(B) He may increase his upland cotton acreage as much as 40 percent over his regular farm allotment and be eligible for price support at a level which is 15 percent of parity less than the level available under Choice (A) above.

2. Will a producer be authorized to elect Choice (A) for one farm and Choice (B) for another farm?

No. If a person operates more than one farm with an upland cotton acreage allotment, he must elect the same choice for all his farms. It is to be noted that this restriction applies only to farm operators.

3. When will a farmer be notified of the acreage allotment under Choice (A) and Choice (B) for his farm and the price support per pound for each choice?

Each farm operator will be notified on Form MQ-24 CN of the Choice (A) and Choice (B) farm allotments applicable to his farm before the marketing quota referendum on December 15, 1959. If quotas are approved, the level

of price support for the crop will be determined about January 31, 1960, and soon thereafter each farm operator will be notified of the price support available for cotton on Choice (A) farms and Choice (B) farms.

4. How long will a producer have to determine whether he will elect Choice (A) or Choice (B)?

If a farmer wishes to have Choice (B) in effect on his farm for 1960, he must make the election on or before March 16, 1960. If an operator does not elect Choice (B) by the closing date, the Choice (A) allotment will be in effect on his farm for 1960.

5. Will the additional acreage in cotton on the farm under Choice (B) result in increased future allotments?

No. The law provides that such acreage shall not be considered as cotton acreage history in establishing future acreage allotments for the farm, county, or State.

6. What is the basis for the proclamation by the Secretary of Agriculture on October 14, 1959, of a national marketing quota and national acreage allotment for the 1960 crop of upland cotton and a similar proclamation for the 1960 crop of extra long staple cotton?

The Agricultural Adjustment Act of 1938, as amended, requires that the Secretary issue such proclamations, not later than October 15, 1959, if he finds that the total supply of cotton for the marketing year beginning August 1, 1959, will exceed the normal supply for such year. In the case of extra long staple cotton, the proclamation is required when the total supply exceeds the normal supply by more than 8 percent. The Act defines total supply and normal supply and their component parts and provides a formula for determining the amount of the national marketing quota and national acreage allotment. The Secretary's findings with respect to total supply, normal supply, and the amounts of the national quota and allotment are shown in Table 2 of this pamphlet for both kinds of cotton.

7. What is the procedure for placing cotton marketing quotas and acreage allotments into effect?

Using the latest available statistics of the Federal Government, the Secretary's findings and determinations with respect to total supply and normal supply were included in the proclamation. The national marketing quotas and acreage allotments for upland and extra long staple cotton were included in the proclamation and also announcement was made that separate national referendums on the two types of cotton would be held on December 15, 1959, for the purpose of providing 1959 eligible cotton producers an opportunity to vote, by secret ballot, for or against the quotas proclaimed. The Act also provides formulas for apportionment of the national acreage allotment to the respective States, the State allotments to counties, and the county allotments to farms.

8. What is the present or prospective carryover, production, imports, domestic consumption, exports and acreage of cotton, and how do the figures compare with other years?

The acreage planted to all cotton, by States, and the supply and distribution of all cotton for representative periods of years are shown in Tables 3 and 4.

9. What generally is the supply and disappearance picture for the next year or two for all cotton?

The carryover of all cotton was 8.7 million bales on August 1, 1959, as shown in Table 2. If exports for the 1959-60 marketing year reach 5.5 million bales, as currently estimated, the carryover on August 1, 1960, would be about 8.9 million bales. On this basis, if production in 1960 equals the national marketing quota, and disappearance and imports for 1960-61 are the same as estimated in the Secretary's proclamation, then the carryover of all cotton on August 1, 1961, would be about 8.1 million bales.

10. How will upland cotton be supported under price support programs for the 1960 crop?

The Agricultural Act of 1958 provides that 1960-crop Choice (A) cotton will be supported by means of a purchase program and that 1960-crop Choice (B) cotton may be supported by means of loans, purchases, or other operations. Under the provisions of the Act, the minimum level of support for Choice (A) cotton, basis Middling 7/8-inch cotton, is 75 percent of parity and the minimum level of support for Choice (B) cotton is 15 percent of parity less than for Choice (A) cotton. The level of support will be determined not later than January 31 and individual producers will be notified of the minimum level, in cents per pound, as soon as practicable after it has been determined.

11. What is the purpose of the Cotton Export Program?

This program was initiated in 1956 in order to reduce the accumulated surplus of United States cotton, which was at a record high at the beginning of that marketing year, and to reestablish and maintain the fair historical share of the world market for U. S. cotton. The export sales program, whereby CCC stocks of upland cotton were offered for sale at reduced prices, for export, was discontinued July 31, 1959. Under the 1959-60 Cotton Export Program - Payment-in-Kind, exporters who register their sales or consignments of upland cotton with CCC can earn payments in the form of certificates redeemable in cotton from CCC stocks. The current rate of payment is 8 cents per pound or about \$40 per bale. Cumulative registrations since the beginning of the program on May 7, 1959, through October 9, 1959, totaled 2,460,519 bales.

12. What is the purpose of the Cotton Products Export Program?

This program was initiated in 1956 in order to equalize the price of cotton for export in the form of products with the price of cotton being sold under the export program. It is carried out by making equalization payments to the exporters of cotton products. The payments reflect the difference between the export price of cotton and the domestic market price of cotton on the raw cotton content of the cotton products exported. Payments to exporters during the 1956, 1957, and 1958 marketing years totaled \$14.0 million, \$15.2 million, and \$13.4 million, respectively. During the current marketing year, payments to exporters of cotton products totaled about \$3.0 million through October 9, 1959. Since the beginning of the program in 1956 payments have been made on exports to 112 foreign countries. Rates of payment have ranged from 5.61 to 7.93 cents per pound.

13. Are cotton yields per acre continuing to increase?

The upward trend in yields per harvested acre is continuing on a national basis and for all major producing areas as shown in Table 5. The estimated 1959 national harvested yield (October Crop Report) of 470 pounds is above the record yield of 466 pounds in 1958. For comparative purposes, the 10-year average yield, 1948 to 1957, is only 329 pounds. While the indicated 1959 yield for the United States is approximately the same as in 1958, there was considerable variation by areas.

14. What has been the reason for the variation in the national acreage allotment available to the States since 1956?

In accordance with the provisions of law, prescribed minimum national acreage allotments have been in effect for each year since 1956. The minimum national acreage allotments for 1957 and 1958 were equal to the 1956 allotment of 17,391,304 acres as compared with 16,000,000 acres for 1959 and 1960. In addition, the minimum State allotment for each of the years 1957 and 1958 could not be less than its apportionment from the national allotment for the preceding year by more than one percent. A national reserve of 100,000 acres for 1957 and 1958 was provided to assist in establishing minimum farm allotments as compared with a national reserve of 310,000 acres for such purpose for 1959 and 1960. The increase in allotments for farms on which the Choice (B) allotments are elected are in addition to the minimum national allotment and the national reserve for 1959 and 1960. In summary, these provisions resulted in nationally allotted acreages for the respective years as follows:

1957	17,585,463 acres
1958	17,554,528 acres
1959	17,329,515 acres
1960	16,310,000 acres plus increases that will result from the election of Choice (B) allotments.

Table 6 shows the acreage allotted to each State for 1960 under the above provisions.

Table 7 shows the number of allotment farms, number of Choice (B) farms, allotment acreage added by Choice (B) elections, and total allotment available for all farms in the 1959 program.

Table 1. State Acreage Allotments for Upland and Extra Long Staple Cotton for 1959 and 1960 with 1959 Acreages for Comparison

1/ Running bales except imports and national quotas which are in 500-lb gross weight bales.

2/ Excludes stockpile and current crop ginnings prior to August 1.

3/ October Crop Report.

Except for certain minimum State allotments for upland cotton the national acreage allotments are apportioned to the respective States on the basis of the acreages planted to cotton in the years 1954, 1955, 1956, 1957, and 1958, with adjustments for abnormal weather conditions during such period.

Prepared in Production Programs Branch,
Cotton Division, CSS, October 1959.

Virginia	: 15,489	: 2,447	: 17,936
United States	: 16,000,000	: 310,000	: 16,310,000

1/ As provided by Section 104(a) of the Agricultural Act of 1958.

NOTE: The law provides that no State shall receive an allotment for upland cotton for 1960 which is less than the smaller of 4,000 acres or the highest acreage planted to cotton in the State in any of the years 1957, 1958, and 1959. The remainder of the national acreage allotment of 16,000,000 acres (announced October 14, 1959) is apportioned among other States on the basis of the acreages planted to cotton in the years 1954, 1955, 1956, 1957, and 1958, with certain adjustments in such acreages as required by law.

Table 7. Upland Cotton, 1959 - Number of Allotment Farms, Number of Choice (B) Farms, Allotment Acreage Added by Choice (B) Elections, and Total Allotment Acreage Available for All Farms

State	Total Number of 1959 Allotment Farms	Total Number of Choice (B) Farms	Allotment Acreage Added by Choice (B) Elections	Total Allotment Acreage Available for All Farms 1/
Alabama	119,760	3,052	14,266	1,002,791
Arizona	4,540	1,085	31,805	362,488
Arkansas	62,187	4,970	97,783	1,435,306
California	15,926	6,127	180,024	913,550
Florida	8,706	149	274	37,948
Georgia	87,016	1,394	4,751	856,444
Illinois	492	77	165	3,298
Kansas	5	4	9	33
Kentucky	1,224	310	1,639	9,179
Louisiana	45,485	2,912	22,675	601,676
Maryland	1	---	---	14
Mississippi	111,997	3,228	77,423	1,649,062
Missouri	15,530	3,648	63,568	421,181
Nevada	21	3	73	3,416
New Mexico	5,525	1,065	19,691	191,016
North Carolina	83,009	5,070	12,045	485,992
Oklahoma	45,372	2,945	24,753	777,237
South Carolina	76,996	5,167	20,630	715,916
Tennessee	62,084	5,552	26,103	581,356
Texas	202,168	21,594	419,239	7,262,797
Virginia	6,412	786	914	18,815
United States	954,956	69,138	1,017,830	17,329,515

1/ Totals are subject to change because of subsequent adjustments for corrections, late hardship adjustments, new farm allotments, reconstitutions, and release and reapportionment of farm acreage allotments.
